December 2005

Issue 5

Merry

Christmas and

Best Wishes for 2006

and Thank You

Monitoring Visit from the HTA

The study has recently received a follow up visit from the HTA monitoring team. The meeting was chaired by Professor Tom Walley who began the meeting by

‘congratulating the project team on their success over the last year in addressing the requirements and concerns of the last visit team and substantially increasing recruitment’

Congratulations everybody this means you!!

Recruitment Extended

As a result of the monitoring visit recruitment has been extended until December 2006. Therefore if you are still thinking about joining the study, there is time but you need to start your R&D application now!!

3880 recruits but we need more!!!!

Cancers

Is everybody aware of all assessments undertaken and cancers detected in the study recruits? This is a vital part of the study. This information must be added to the database or given to the study coordinator. All cancers whether screen detected or interval need to be reported.

Mammograms

Please ensure data is being recorded for those recruits who are now having their second or third study mammograms.

Excluded from study

The database now has a field for recording when recruits leave the study. Please fill this in when recruits move away, have their risk status changed, decline to take part or other reasons.

For more information, please contact:
Sue Thomas, FH01 study co-ordinator.
